Figure 1.

Transabdominal ultrasound of the pelvis showing a lesion arising from the right seminal vesicle.

Figure 2.

CT scan of the pelvis showing two rounded cysts.

Figure 3.

IVP showed that the right supero-external margin of the bladder wall was impressed.

Figure 4.

Pathological result showed a monotonous pattern of small round cells.

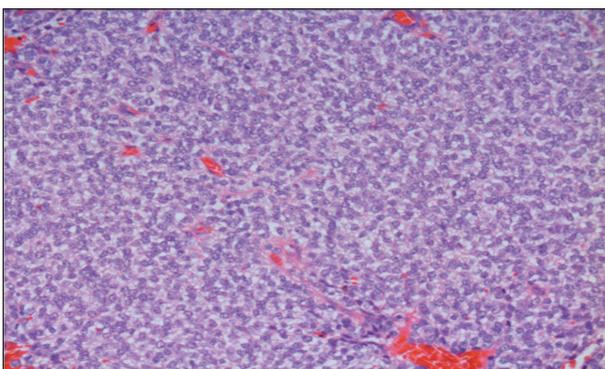

Figure 5.

Histoimmuno-chemistry showed CD 99 positivity, a typical small round cells marker of Ewing's sarcoma/PPNET.
