

behavior. The three variables exerting the most significant influence on Parenting Strategy are Autonomy, Competence, and Relatedness. The primary limitation of this research is its conduction during the COVID-19 pandemic, leading to continued online learning. Consequently, the questionnaire was distributed via a Google form, facilitated by the homeroom teacher, who then informed all students. This method might result in some respondents facing challenges in understanding the questionnaire content on the Google form. Parents and teachers can utilize the findings of this research as a reference for providing care to children, aiming to prevent internet gaming disorders. Recommended actions include supervising children, staying informed about digital developments, and fostering warm relationships among parents, teachers, and children.
